(1) For a full description of the NAICS (North American Industry Classification System) codes used in this table, see the 2002 NAICS manual or <http://www.census.gov/eos/www/naics/>.

(2) Includes NAICS 484 (truck transportation), 492 (couriers and messengers), and 493 (warehousing and storage).

Note: Sector totals and subsector totals may include data for kinds of business not shown. Table 12 provides estimated measures of sampling variability. Data users who create their own estimates using data from this report should cite the U.S. Census Bureau as the source of the original data only. Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at [www.census.gov/svsd/www/qssreliability.html](http://www.census.gov/svsd/www/qssreliability.html).

(p) Preliminary estimate. (r) Revised estimate.

Note: Estimated measures of sampling variability are based on data not adjusted for seasonal variation, and should be used when drawing inferences about both adjusted and not adjusted estimates. Starting with the September 2010 release, estimated measures of sampling variability correspond to the particular quarterly estimates. In prior releases, measures of sampling variability were medians based on estimates for the most recent four quarters. To compute a median comparable to what was previously published, identify the sampling variance measure of interest for the most recent four quarters. Sort the four quarterly sampling variance measures in ascending order. Compute the median by adding the middle two values together, dividing the sum by two, and rounding the result to the nearest tenth. Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at [www.census.gov/svsd/www/qssreliability.html](http://www.census.gov/svsd/www/qssreliability.html).
